## Scope and methodology

This report examines the current market for local marketing solutions (LMS) for multi-location businesses and the considerations involved in implementing LMS software. This report answers the following questions:

- Why do multi-location brands need LMS software?
- What are the elements of a successful local marketing campaign?
- Which elements of local marketing can be automated?
- What capabilities do local marketing solutions provide?
- Who are the leading players in local marketing solutions for multi-location businesses?
- How much do LMS cost?
- What questions should we ask ourselves and vendors before we adopt this software?

For the purposes of this report, local marketing solutions (LMS) for multi-location businesses are defined as tools to help manage one or more of the following digital marketing functions at the local level: online listings management and distribution; search engine optimization (SEO); landing page design and development; paid media campaign management and execution; and online brand ratings and review management. A critical component of LMS is the ability to support centralized corporate marketing and its local network with brand consistency and control that is combined with geographically targeted messaging.

A number of vendors have started referring to listing management as “location data management.” We have retained the old name for clarity and consistency with previous reports but expect this name to become more common. The term “presence management” is increasingly being used to describe the way multi-location companies can manage their listings. Data aggregators are now sometimes referred to as “data amplifiers.”

If you are considering licensing a local marketing solution for your multi-location business, this report will help you decide whether you need to. The report has been updated since its June 2019 publication to include updated industry statistics, evolving market drivers, and new product updates. The focus of this report is digital marketing media; traditional local marketing channels are not covered. The report includes recommended steps for choosing a local marketing solution and contains profiles of 21 vendors.

This report focuses on local marketing solutions for multi-location brands or enterprises that sell or distribute their products and services through a large network of agents, dealers, retail locations or franchisees. The vendors profiled are representative of the choices available for multi-location local marketing; they are not a comprehensive list of LMS tool or platform vendors. This report is not a recommendation of any LMS tool or company and is not meant to be an endorsement of any particular product, service, or vendor.

This report was prepared by conducting in-depth interviews with leading vendors and industry experts. Interviews took place in October, November and December of 2019. These, in addition to third-party research, form the basis for this report.

# One platform for all your marketing and media technology.

## Only one portal can combine all of these services:

- Territory Analysis
- Data Aggregation
- Print On Demand
- Specialty Products & Apparel
- Creative Version Automation
- Social Media Management
- Email Marketing
- All Media Planning & Buying

A single solution.

Designed with franchise and multi-unit brands in mind, Silvercrest's technological innovation and custom-built tools can simplify your national and local marketing needs.

From digital to print on demand to broadcast media, customize, localize, execute, and deploy—all from one platform. Create rules, variables, and options for local stores to manage and place their own local marketing efforts that are on-brand. Or plan and place at a brand level across your network, nationally or regionally.

All powered by our user-friendly, cutting-edge, cloud-based system, Local Marketing Automation Platform (LMAP).

## Local marketing overview

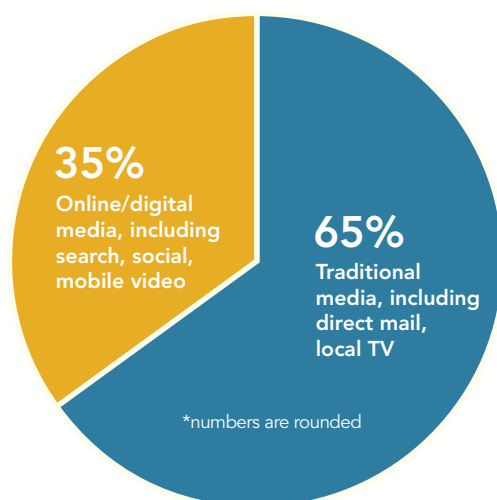

U.S. local advertising revenues are expected to reach \$151.2 billion in 2018, representing a 5.2% year-on-year increase from \$143.8 billion in 2017 – the largest annual increase in five years, according to research firm BIA/Kelsey's U.S. Local Advertising Forecast 2018. This expected growth is being driven by a stronger economy, a competitive political landscape heading into the midterm election season, and robust growth in mobile and social media, according to the report. Local advertising revenues fell short of predictions in 2017 thanks to a weaker economy than expected – initial predictions had forecast revenues of \$148.8 billion for 2017, which were revised down to \$147.9 billion mid-year. The actual revenues of \$143.8 billion were well below what analysts expected, but BIA/Kelsey expects the industry to make up for lost ground in the current year.

Traditional media maintains a strong hold on the market, comprising 64.7% of the expected revenue, while online/digital media will account for the remaining 35.3% (See Table 1). Direct mail remains the most important method for delivering local ads to consumers, accounting for 25.4% or \$38.5 billion of total local advertising spend. Interestingly, BIA/Kelsey's prediction for direct mail's share is higher in 2018 than it was in 2017, when they predicted it would have a 24.9% slice of the local advertising pie. Direct mail continues to appeal to local advertisers thanks to its high conversion rates of 3-5% combined with ROI that is comparable to some digital media, according to BIA/Kelsey.

Local TV enjoys the second largest share of the market, at 13.8%, or \$20.8 billion in revenues. However, the main growth within the local video advertising market will come from local mobile video (reaching over \$1 billion) and local online video (surpassing \$2 billion), BIA/Kelsey reports.

**Traditional media maintains a strong hold on the market, comprising 64.7% of the expected revenue, while online/digital media will account for the remaining 35.3%.**

**Table 1: Traditional versus digital media as percentage of local advertising spending**

Source: U.S. Local Advertising Forecast 2018, BIA/Kelsey

Pure play mobile will account for 12.6% of total local advertising spend in 2018, and BIA Kelsey predicts it will reach 19.2% of the market by 2022 – putting it in the second top spot for market share. Location targeted mobile ad spending is set to hit \$22.1 billion in 2018, rising to \$38.7 billion by 2022. (See Table 2).

Source: U.S Local Advertising Forecast 2018: Mobile and Social, BIA/Kelsey.

**Many multilocation brands outsource their local marketing activities to agencies, and Google has now made it easier for these agencies to manage their clients' accounts on Google My Business (GMB).**

## Google My Business API and other Google updates

Many multilocation brands outsource their local marketing activities to agencies, and Google has now made it easier for these agencies to manage their clients' accounts on Google My Business (GMB). Google launched a new GMB API and dashboard in May 2018, enabling agencies to manage merchant descriptions and Posts for brands at scale, and making it possible for one GMB account to manage an unlimited number of locations – this was previously limited to 100 locations.

The new dashboard includes improved search functionalities and features new workflows to send and receive invitations to manage listings. User Groups enable users to manage internal teams and control access to locations.

Google also recently updated the format of Featured Snippets to include additional snippets and search refinement bubbles underneath the suggested results, giving users options to deepen their search, without leaving the search engine results page (SERP). This was brought to market in late 2017 and rolled out more widely in the US in January 2018. As a result, consumers will increasingly find what they are looking for right within the SERP without heading to websites to drill down their searches. This makes SEO more important than ever as it is imperative for brands to rank highly to be found.

Reserve with Google, rolled out in March 2017, enables local businesses to offer online bookings from within Google Search or Maps, or on the Reserve with Google website. It can be integrated with brands' existing booking systems, so bookings can be captured from various sources.

Google Posts, a microblogging feature within GMB also rolled out in 2017, enables users to instantly populate content to the Knowledge Panel and individual listings. Marketers are still discovering new ways to make use of this feature, but some businesses are finding it can boost their bookings by 10% or more, and it requires less integration work than the Reserve with Google product.

## Mobile marketing really does drive offline sales

Some 82% of smartphone users turn to search engines to find local businesses, and nearly one third of all mobile searches are related to location, according to Google. People increasingly expect Google to know where they are thanks to their devices and use search to find out where to buy what they need on the go. The number of “near me” mobile searches showing clear purchase intent increased over 500% between 2015 and 2017, while the number of “near me + now” searches increased 150% over two years, and the number of “near me + today / tonight” searches went up 900%, according to Google.

Mobile has become a central part of each stage of the customer journey, influencing 56% of offline sales, and more than \$2 trillion in retail sales in 2017, according to eMarketer. Even though mobile eCommerce only represents about 10% of all goods currently sold in the US, consumers are using their mobile phones to look up information and guide them every step of the way to the cash register. Local marketers, from SMBs to national brands, are determined to reach these potential customers in their moments of expressed intent, which means adopting a mobile centric strategy.

Proving mobile marketing ROI has become easier over the last year, thanks to improved mobile-to-store attribution and POS data matching. Analytics have also improved, with social channels providing details on pre-purchase actions such as Click-to-Call and Click for Directions, and Facebook's Store Visits and Snapchat's Snap to Store capabilities enable marketers to attribute increases in foot traffic to specific marketing campaigns.

Google has made several moves to show its preference for mobile, including the rollout of its mobile-first index in March 2018 (whereby its crawling, indexing and ranking systems will use the mobile version of some websites rather than their desktop versions), and the launch of accelerated mobile pages (AMP) in 2016, which provide increased loading speed for mobile web pages. While Google claims that AMP is not a ranking signal, page speed certainly is. It is not uncommon for all the pages appearing in the top search carousel to be AMP pages, especially when it comes to news. Many brands and advertisers are defaulting to AMP for product listing ads, news, recipes and other content, because of their mobile friendliness and faster load times.

Local advertising also requires a strong focus on mobile apps, with social media apps being especially important. On mobile devices in particular, consumers engage with local landing pages on Facebook and Google Maps more often than with a brand's own corporate website or apps. As much as 85% of a brand's interactions take place through local social profiles, reviews and maps, while only 15% of brands' total influence on mobile comes from corporate websites, according to 2017 research by MomentFeed.

## The rise of voice activation and AI

Voice activation has seen major growth, thanks to the rise of virtual assistants such as Amazon's Alexa, Google's Google Now, Apple's Siri and Microsoft's Cortana. Consider the data:

- There will be over one billion voice assistant enabled devices in circulation by the end of 2018.
- There are already over one billion voice searches each month.
- Almost a third of all Google searches are voice searches.
- Half of all searches will be voice searches by 2020.
- Some 55% of US households are forecast to have a smart speaker by 2022.

**Proving mobile marketing ROI has become easier over the last year, thanks to improved mobile-to-store attribution, and POS data matching.**

The increasing use of voice search means consumers are using more natural language in their search queries, which has big implications for SEO. For example, where they used to type "Pizza delivery near me", now they will say "Where is the nearest pizza delivery place?" Local marketers need to optimize their keywords and tags to accommodate the growing volumes of natural language queries. Many LMA vendors are working to incorporate voice optimization features in their offerings.

Artificial intelligence and machine learning have become a significant component of search engine marketing (SEM) automation. AI/ML capabilities underpin much of the activity when it comes to optimizing key words or bidding and campaign management. Vendors are increasingly embedding these technologies in local marketing automation platforms, to help brands improve click-through rates and SERP rankings.

**Artificial intelligence and machine learning have become a significant component of search engine marketing (SEM) automation.**

## GDPR – brands should understand its impact on their business

The European Union's General Data Protection Regulation (GDPR) came into effect on May 25, 2018 and represents a massive change to data privacy laws. It affects all firms that have operations in the European Union, as well as any customers that are EU citizens – wherever in the world they may be – and gives those individuals the right to know what data is being stored on them by whom, and to have that data erased. Brands risk losing consumer confidence, or perhaps worse, fines of up to EUR 20 million or 4% of global turnover for noncompliance. It remains to be seen how aggressively it will be enforced, but it represents a big challenge for many firms that collect and process consumer data.

Gartner predicted in 2017 that more than 50% of affected firms were going to be underprepared for GDPR. Local US brands with local US customers may find they are not impacted heavily by the regulation, but it is worth understanding the law as its implications are wider than many realize.

## Critical elements for local marketing success

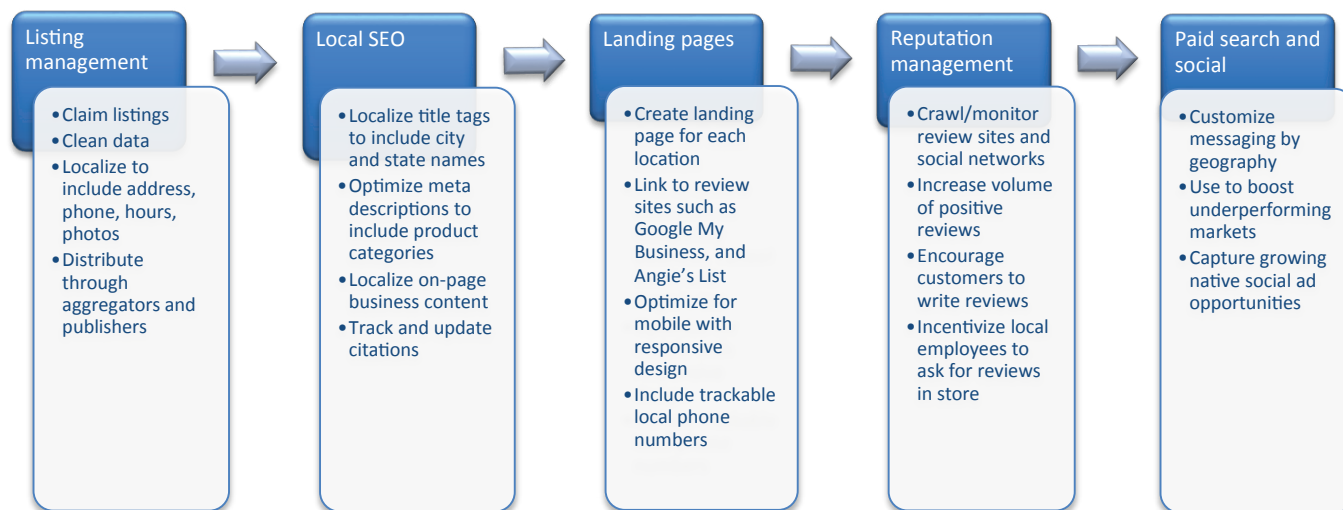

What goes into a successful local marketing campaign? Best practices that have emerged focus on these five campaign elements:

1. Listing management.
2. Local SEO.
3. Local landing pages.
4. Reputation management.
5. Paid search and social media.

Industry experts agree that accurate, up-to-date business location data is the lynchpin for all local marketing initiatives. Enterprises must first assess the health of every local data point, including business name, address, phone (a.k.a. "NAP"), and business hours. From there, more effective local landing pages, search optimization, monitoring of online reviews and ratings, and engaging in paid search and social advertising should follow.

The following section discusses each of these campaign elements in more detail. When planned and executed as a five-step process (see Table 3), these elements can deliver an effective local marketing strategy for national brands with multiple locations.

Table 5: Five steps to effective local marketing

Source: Third Door Media

## 1. Listing management

The foundation of successful local marketing is clean data and accurate listings – including NAP, maps, photos, and business hours.

Every mention of your business on the web is known as a 'citation' and may include all or part of your NAP. Making sure this information is consistent is crucial to being found locally; even minor discrepancies in a company name ('ABC Corp.' vs. 'ABC Inc.') can have a negative impact on your results.

National brands lose a huge amount of local business every year due to inaccurate online listings and the poor SERP rankings that result. Perhaps nothing can turn away a potential customer more than a disconnected phone number or a closed store.

It is critical to claim your local listings by providing accurate information to search engines and online directories (namely Google, Facebook, Apple Maps, Bing and Yelp). In travel and hospitality verticals, brands will also benefit from claiming listings on sites such as Kayak, TripAdvisor or OpenTable. There are a range of third party data aggregators and local data or presence management services (LMS) that will manage listings for multilocation brands (see Table 6).

Unclaimed listings occur when online directories index and publish business pages for your business without your knowledge through scraping the web or purchasing outdated business data. Once these listings are published, Google may create a business page from this data, which often means the correct category for your business has not been selected, your keywords have not been targeted, and other information may be inaccurate as it was obtained from unreliable sources.

Claiming your listings also gives the site publisher a direct, verified relationship with your organization. It establishes your brand as the listing's owner and gives you control over all content and updates. Several LMS vendors will claim listings on their clients' behalf as part of their listing management services.

Local listings should include as much information as is available – product descriptions and categories, services provided, hours of operation, coupons, photos, and payments accepted. This type of accurate, updated, and consistent local data will drive high search engine rankings and ensure that online searchers can find your locations. Photos in particular can have a major impact – restaurants with 11-20 photos see “double the amount of diner interaction over others with no photos at all” on TripAdvisor, and on Yelp, businesses with 1-5 reviews and at least 10 photos see 200% more user views than a business with no photos and the same number of reviews. Overall, businesses that complete their profiles on TripAdvisor and Yelp may see up to five times more customer leads each month, according to SearchEngineLand.

Once claimed, listings must also be regularly monitored, as it is possible for anyone – including competitors or those with nefarious intent – to edit your listing once it is live, especially on Google My Business. So even if your listing was once accurate, you need to check regularly that it has not been changed without your knowledge.

Listings should be distributed to the leading search engines, online directories and social media networks. Beyond the major sites such as Google, Facebook, Yelp and Apple Maps, there are selected directories and vertical sites that remain important. These will depend on your industry. However it's no longer necessary to distribute your data to many dozens of obscure directories that have no consumer usage. Most LMS providers will ensure that business data reach all the necessary and relevant directories online, although their individual distribution networks may vary somewhat from one to another.

## 2. Local SEO

Local SEO is a regularly changing discipline with its own specific rules and best practices that are often distinct from general SEO. However, local SEO and listing management are closely linked: accurate, complete, and consistent listings improve search engine rankings. As search algorithms continue to drive more relevant results based on user locations, it has become more critical to optimize local landing pages with neighborhood information. Google in particular is constantly updating its API to enable more efficient SEO.

Local pages need to be found on their own, as well as through your national brand site. This means localizing how your site is coded; how you treat name, address, and phone number; and how you structure your URL through the following:

- Localize title tags to include city and state names;
- Optimize meta descriptions beyond brand name to include product categories;
- Implement localized schema markup for local business names, addresses, and phone numbers;
- Localize URL structures to include street names and product categories; and
- Localize on-page business content to include hours, driving directions, and local descriptions.

All location data should be optimized to maximize your SEO efforts. This includes location data changes, new store openings, store closings or moves to new locations, business hours changes, holiday hours, etc. It is essential that this data is current and fed to internet yellow pages (IYPs) since search engines cross-verify their data with IYP data. When the data matches, it becomes trusted, verified data and results in better rankings.

**As search algorithms continue to drive more relevant results based on user locations, it has become more critical to optimize local landing pages with neighborhood information.**

**3. Local landing pages**

Each brand location should have its own mobile-friendly landing page. Consumers are looking for you locally – often on the go – and a local landing page can be the hub for all local marketing and SEO efforts. It captures consumer demand, streamlines marketing efforts, and provides metrics for future campaign optimization, which is extremely important when you are relying on thousands of local websites. Local landing pages should be simple yet comprehensive, featuring the business name, address, phone number, products carried, store hours, and even a photo of the business owner or storefront. These pages should be responsively designed with title tags and descriptive schema markup to send information to the search engines. Incorporating trackable local phone numbers can help you capture the growing audience of mobile phone users that want to contact local businesses and enable you to measure campaign performance. Links to review sites such as Google My Business, Yelp, Facebook and other industry relevant sites such as TripAdvisor should also be included.

Store locators also should be easy to browse and responsively designed for mobile users. Apply product feeds to local landing pages to provide users with access to “in-stock” products or real-time inventory.

**4. Reputation management (online reviews and ratings)**

User-generated reviews and ratings continue to have significant influence on potential buyers, with 76% trusting online reviews as much as recommendations from family and friends, and (BrightLocal, *Local Consumer Review Survey 2019*). Consumers read an average of ten reviews before trusting a business.

Major search and review sites assign significant weight to online reviews. Google's review count and score are factored into local search rankings, meaning that a business's local ranking will improve the more reviews and positive ratings they have. Customer reviews are some of the most compelling marketing content available to businesses and have the greatest potential to influence new customers.

The best way to increase the number of positive reviews being written about your locations is to ask customers to write them. Make it easy to do so by including a widget or button that offers one-click access to review writing. However, it is important to encourage reviews in a way that does not imply a quid pro quo. Many companies still offer incentives or contests to gain reviews, but Yelp does not permit solicitation of any kind and will punish brands that do this. Google allows businesses to encourage reviews by reminding customers to leave feedback on Google. However, Google's Local Review Policy prohibits businesses from offering money or products for writing reviews, as well as setting up review stations or kiosks within a store.

As more and more businesses strive for positive, user-generated reviews, it's important to make sure that these are authentic. Consumers have grown more skeptical about reviews, due to publicity around businesses that have stooped to using fake reviews. Some 82% of survey respondents told BrightLocal that they had read a fake review in the last year – up from 74% in 2018 and it's likely that many consumers -- especially older, less tech-savvy users -- can't always spot a fake review.

Negative reviews are inevitable and should be managed. Follow up with negative reviewers to address their issues and turn their experiences with your organization into positive ones. While the writing of reviews cannot be automated, it is possible to monitor reviews using local marketing automation tools.

**5 WAYS TO LOCALIZE LANDING PAGES:**

1. CREATE PAGE FOR EVERY LOCATION
2. ADD LINKS
3. MAKE COMPREHENSIVE
4. USE VISUALS
5. BE MOBILE-FRIENDLY

### 5. Local paid search/social

Paid media – namely search, display, and social – are core components of a sound digital marketing strategy. Native social advertising that can be geographically targeted are now commonplace across networks such as Facebook and Twitter.

Localizing your brand's paid search or social efforts is essential, as consumers have come to expect local and personally relevant results and content. Google's Promoted Pins across Google.com and Google Maps, are one way for brands to connect with mobile consumers and drive offline conversions. Customizing messages for users in a particular geographic market can communicate the right per-store promotional information and communicate offline "flash sales" digitally. Local search and social can be used to capitalize on regions where business is strongest or become a lever that can supplement marketing in underperforming regions to increase awareness and improve sales.

**Localizing your brand's paid search or social efforts is essential, as consumers have come to expect local and personally relevant results and content.**

## Capabilities of local marketing solutions for multi-location businesses

M&A activity is robust in the sector, with venture capital funding new point solutions, larger firms acquiring them for their niche functionality, and other firms merging to gain market share and offer more rounded platforms. Some standalone platforms have spun out of agency offerings and some vendors offer agency services on top of their solution. Other vendors have benefited from private equity funding to roll out new predictive marketing activities using AI / ML.

Acquisitions over the last couple of years include Reputation.com's buyout of SIM Partners in February 2018, Ignite Technologies' April 2017 acquisition of Placeable, and Gannett's purchases of SweetIQ (in April 2017) and ReachLocal (in August 2016).

Local marketing solutions centralize functions such as updating and managing listings, developing responsively designed local landing pages, providing local data analytics around SEO, and monitoring online reviews and ratings to offer more of a "one-stop shopping" approach to enterprise marketers. There are also many point solutions available that focus on one element of local marketing, such as automating listing distribution.

The following "must-have" capabilities form the foundation for effective local marketing:

- Listing management (includes claiming and cleaning listings);
- Listing distribution (either direct to publisher or through aggregators);
- Local SEO;
- Local landing pages; and
- Mobile optimization of local content.

Local marketing solutions positioned as full-service platforms may also offer more extensive feature sets that may still be considered "nice-to-have" but that integrate multiple functions into a single screen. These capabilities may include, but are not limited to:

- Reputation management (through online reviews and ratings monitoring and analysis);
- Local paid search or social advertising campaigns;
- Social media posting and management;
- Offline attribution capabilities (using mobile location data, surveys, WiFi, POS tie-ins);
- Local data analytics.

The following section discusses some of these capabilities and the key considerations involved in choosing an enterprise LMA platform (see Table 6).

### **Listing management (including maps)**

Managing the vast amount of local listing data can be unwieldy for enterprises with thousands of locations. Many local marketing solutions feature content management systems (CMS) to create centralized repositories of local data. These systems often include built-in permission hierarchies to provide varying levels of data access.

Local marketing solutions vendors can also help clients with the complicated process of claiming listings across search engines and online directories. You can also use local data aggregators, including Factual, Infogroup and others, to do the same thing. However, these services update data at different rates and there may be a lag between the time of data submission to the aggregator and when the updated information appears in search engines or directory sites.

Automating and centralizing this information has become more critical as smartphone adoption has increased and mapping apps have become ubiquitous.

Several local marketing solutions include sites such as Facebook Places in their listing distribution by automatically feeding listings into the Facebook format. Social signals also impact search algorithms since search engines weight “people links” higher than other links that can be “managed” or paid.

**Several LMA platforms include sites such as Facebook Places in their listing distribution by automatically feeding listings into the Facebook format.**

### **Local SEO**

Local listings and landing pages need to rank well to be found in SERPs. Accurate, consistent content is the most effective way to improve search engine rankings. Many of the leading local marketing solutions offer tools that provide SEO check-ups or audits and rank checkers, then centralize and update listing data, and optimize landing page content for search engines (i.e., meta descriptions, title tags, schema.org tags). Ranking data can be analyzed at the local level by city, ZIP, and multiple city groups.

Several local marketing solutions vendors also provide tools that track and report on web-based citations. A citation is any web-based mention of your location that may or may not be linked to a landing page or website. Citations may contain complete or incomplete listing information but are a critical factor in local search engine rankings. For example, citations from well-indexed listing portals such as Superpages can increase the validity of your location's listing information for Google or Bing. By tracking and updating citations with accurate and complete data, SERP results can improve.

### **Local landing pages**

Local marketing solutions provide a wide range of localized landing page design and development services for both experienced and novice digital marketers. These include template-driven pages, lead capture forms, and mapping tools, as well as content wizards that enable brands to publish local content, events, and offers. All local landing pages should be optimized for mobile users, and deliver a rich, engaging experience that can be viewed on one page with clear calls to action and links to rank-boosting sites such as YouTube and Google Maps.

## **Paid media (social and search) campaign management**

According to Google, at least one third of mobile searches have a local intent, making paid media a critical component of local marketing. Yet localizing paid media is a challenge for multi-location brands. It requires managing hundreds of thousands of keywords and bids for hundreds or thousands of brick-and-mortar locations. Local marketing solutions automate the process through tools such as keyword libraries, ad templates, analytics, and access to local ad networks such as CityGrid.

## **Mobile optimization**

Local marketing solutions differ in their mobile capabilities. Some enable clients to create responsively designed landing pages for both desktop and mobile experiences. Other platforms focus on responsively designed listings for distribution to mobile apps and mobile HTML, in addition to the desktop.

Many vendors partner with call analytics providers to enable marketers to include trackable phone numbers and 'click-to-call' options in their mobile efforts.

Local marketing solutions vendors also partner with promotion companies to allow consumers to download coupons into their phones or mobile wallets for payment. These 'near me' marketing opportunities allow marketers to capitalize on the consumer's location and product needs and bridge the gap between online activity and offline purchases.

Despite the hype, in-store beacon technology has not taken off as expected, due in part to the high costs of installing the beacons and their limited effectiveness as consumers have to opt in to take part. Beacons are still being used, but they now represent just one way in which marketers can track a user's location to send them targeted messaging.

## **Reputation management (online reviews and ratings)**

Local marketing solutions automate the local reputation management process by crawling review sites to collect, analyze, and report on reviews by either source, location or sentiment. Several vendors also provide tools that make it easier for customers to post online reviews. For example, the platform integrates with a client's point-of-sale (POS) and CRM systems so that when an email address is collected the system generates a brief customer survey and asks for a review with a link to the local store page.

## **Local data analytics**

Enterprises today expect to be able to prove the ROI of their local marketing efforts. Local marketing solutions vendors provide reporting on SEO ranking trends for local landing pages, the volume of online reviews for specific locations, as well as increases (or decreases) in average star ratings by location. Several vendors are also reporting on the impact these trends are having on store traffic, sales or online conversions.

**Local marketing solutions automate the local reputation management process by crawling review sites to collect, analyze, and report on reviews by either source, location or sentiment.**

# Choosing a local marketing solution for your multi-location business

## The benefits

Managing online citations, claimed and unclaimed listings, landing pages, reviews and ratings, and data feeds for hundreds or thousands of locations has become time consuming and costly for enterprise brands. Automating local marketing processes through local marketing solutions can provide numerous benefits, including the following:

- **Improved search engine rankings.** Accurate business listings and optimized landing pages can boost search engine rankings. Google's crawlers are increasing their reliance on site authority and validation – which come from accurate and consistent business information across a range of directories and backlinks. Automating listing distribution and landing page development and optimization expedite these processes and can help move your individual store or dealer locations to the top of SERPs.
- **Increased productivity.** Manual tasks such as SEO and schema markup, online directory listing management and distribution, search engine map management, and development and maintenance of mobile-optimized local landing pages are time consuming and tedious. Automating these processes frees up both your corporate marketers and your local managers to focus on their primary roles: marketing your brand and selling your products and services.
- **More cost-efficient marketing.** Case studies from national retailers show that automating local marketing functions can help to lower CPCs due to better SEO.
- **Better message coordination and consistency.** Local marketing solutions foster coordination between national and local marketers through CMSs that centralize brand marketing messages, campaigns, and product information; as well as location data including addresses, product selections, and business hours. The result is the ability to disseminate and deliver brand-approved consistent, accurate marketing information across locations.
- **Expanded local marketing expertise.** Digital marketing expertise varies widely across local networks of dealers, franchisees, and retailers. Many LMS vendors offer strategic services and internal adoption strategies to help clients engage local businesses and make local marketing a more successful endeavor. Automating creative processes such as landing page development also ensures brand message consistency and quality.

An important consideration in choosing to automate local marketing processes is cost. The majority of local marketing solutions license their technology on a software-as-a-service (SaaS) basis that is priced by the number of locations (or clients in the case of an agency) using the platform each month. Professional or strategic services, if needed, will add to the total, as will implementation fees that cover system configuration and integration with legacy systems. Many vendors offer month-to-month pricing or volume discounts to large enterprises.

**Understanding your current marketing processes, knowing how to measure success, and being able to identify where you are looking for improvements, are all critical pieces of the LMS decision-making process.**

## Recommended steps to making an informed purchase

Understanding your current marketing processes, knowing how to measure success, and being able to identify where you are looking for improvements, are all critical pieces of the decision-making process. The following section outlines four steps to help your organization begin that process and choose the local marketing solution that is the right fit for your business needs and goals.

### Step One: Do you need a local marketing solution?

Deciding whether your company needs such a platform calls for the same evaluative steps involved in any software adoption, including a comprehensive self-assessment of your organization's business needs, staff capabilities, management support, and financial resources. Use the following questions as a guideline to determine the answers.

- 1. Have we identified our local strategy and goals?** Automating local marketing can benefit the organization in many ways – but you need to know what you want to achieve and how you're going to achieve it. Do you want to increase in-store traffic or leverage local search to trigger online sales? Do you want to drive traffic to local landing pages and trigger calls to action? Or, is cleaning and optimizing listing data enough of a goal if you are just beginning to manage the process?
- 2. Have we established KPIs and put a system in place for tracking, measuring, and reporting results?** Once you've established clear goals you will need to measure your progress achieving them with a series of KPIs that range from high-level campaign ROI to local-level metrics such as increases in landing page or in-store traffic and conversions. Improvements in SERP rankings are also important indicators that more accurate and centralized business listing data is paying off.
- 3. Do we have C-level buy-in?** Local marketing solutions for multi-location businesses involve is a five- or six-figure investment annually. Skeptical CMOs need to understand what the return on that investment will be. Outlining your strategy, goals, and KPIs is critical to winning their long-term support.
- 4. Do we have the right human resources in place?** One of the most common issues for enterprise multi-location marketers is the varying skill levels and lack of time and financial resources that local managers have for marketing initiatives. What budget will cover LMS expenses? How will you engage local managers and encourage platform adoption? Do you have corporate marketers to guide them through the process? Or will you need to invest in the platform vendor's professional services to develop that expertise?
- 5. Can we invest in staff training?** If you decide that training is essential for local managers and even corporate marketing staff, have you put aside the resources to pay for it? A successful local marketing solution implementation will find ways to inject the LMS knowledge into existing training programs and identify internal evangelists to broadly distribute the messages. Training needs to be comprehensive, consistent, and continuous.
- 6. Who will own or manage the local marketing solutions?** These tools present a dilemma for many enterprises because of the existing conflicts in corporate and local decision-making. Corporate marketers may have a hard time getting local managers to provide and update listing information or follow brand guidelines in creative messaging and design. It's important that local and corporate managers work together to maximize the value of local marketing solutions technology.

**One of the most common issues for enterprise multi-location marketers is the varying skill levels and lack of time and financial resources that local managers have for marketing initiatives.**

## Step Two: Identify and contact appropriate vendors

Once you have determined that local marketing solutions sense for your brand, spend time researching individual vendors and their capabilities by doing the following:

- Make a list of all the capabilities you currently have, those that you would like to have, and those that you can't live without. This last category is critical, and will help you avoid making a costly mistake. For example, if generating more positive online reviews is a critical concern, this is one capability you will focus on during vendor interviews and demos. If you find that one vendor doesn't offer this "must-have" capability, it's obviously not a fit.
- Take your list of capabilities and then do some research. The "Resources" section at the back of this report includes a list of blogs, reports, and industry research that will help. (Many of the vendors profiled in this report also provide whitepapers and interactive tools that can help.)
- Narrow your list down to those vendors that meet your criteria. Submit your list of the capabilities you've identified and set a timeframe for them to reply.
- Decide whether you need to engage in a formal RFI/RFP process. This is an individual preference, however be sure to give the same list of capabilities to each vendor to facilitate comparison.

**Decide whether or not you need to engage in a formal RFI/RFP process. This is an individual preference, however be sure to give the same list of capabilities to each vendor to facilitate comparison.**

The most effective RFPs only request relevant information and provide ample information about your brand and its needs. It should reflect high-level strategic goals and KPIs. For example, mention your company's most important KPIs and how you will evaluate the success of your efforts. Include details about timelines and the existing digital technology you have deployed.

When written properly, an RFP will facilitate the sales process and ensure that everyone involved on both sides come to a shared understanding of the purpose, requirements, scope, and structure of the intended purchase. From the RFP responses, you should be able to narrow your list down to three or four platforms that you'll want to demo.

## Step Three: Scheduling the demo

Set up demos with your short list of vendors within a relatively short timeframe after receiving the RFP responses, to help make relevant comparisons. Make sure that all potential internal users are on the demo call, and pay attention to the following:

- How easy is the platform to use?
- Does the vendor seem to understand our business and our marketing needs?
- Are they showing us our "must-have" features?

Other questions to ask each vendor include:

1. **How do you syndicate listings?** Local marketing solutions vary in their listing distribution strategies. Some help their clients claim listings and do direct-to-publisher submissions via APIs. Other vendors use large data aggregators to distribute listings, which can result in a significant (i.e., two to three months) time lag in updating data.

2. **What kind of global coverage does the platform provide?** International search engines and social networks are becoming increasingly important to many enterprise brands. If you manage international locations and have a large foreign customer base, find out if the platform standardizes foreign addresses and syndicates listings to foreign online directories.
3. **Does the platform automatically optimize content for mobile devices?** Most vendors offer built-in mobile optimization for local landing pages and/or listings. Find out what the vendor's mobile capabilities are as well as what capabilities they offer to deal with voice activation.
4. **How easy is integration with our existing CRM or marketing automation platforms/tools?** Integrating software systems has become critical for brand marketers who are inundated with digital data. Customers are increasingly moving across platforms and siloed systems are too expensive and inefficient to connect the dots. Find out if the vendor can connect to your system APIs – or if you would need a more expensive custom integration.
5. **Is there a workflow and permissions hierarchy that allows me to coordinate the work of my corporate marketers with all our locations?** Local marketing solutions management will vary from enterprise to enterprise. Many national brands want to maintain marketing control on behalf of local distributors, franchises, or retail locations. Some platforms will automatically deploy brand-approved content through a CMS. Other systems allow local and corporate marketers to create and post content. You'll need to understand your organization's needs and assess whether the vendor's workflow capabilities are a good match.
6. **How robust and flexible are your reporting options?** Different users have different reporting needs. Find out if reports can be customized and automatically delivered to different users and types of users. For example, high level KPIs for the CMO versus drill-down details for web development or IT. And, whether all data can be exported in CSV format.
7. **Does your company white label the platform and/or reports for agencies?** Agencies represent almost half of the local marketing solutions market. If you are an agency executive, or a brand that plans to let your agency manage the platform, you may want to white label all reports.
8. **What kind of ongoing support and client engagement will your account team provide?** How will you gauge our use or non-use of the tool's features? One of the most common reasons a company transitions out of an enterprise tool is because they don't use it enough. A vendor should be prepared to address this issue and specifically how the tool creatively engages users and gets them back into the environment.
9. **What new features are you considering?** What's the long-term roadmap and launch dates? The local marketing solutions landscape is rapidly maturing and "nice-to-have" features are quickly becoming "must-have" features. It's important to understand the vendor's level of innovation and the ability to add and track emerging technologies. Knowing a vendor's new feature release date schedule and its ability to stick to committed timelines is also very important.

## Step Four: Check references, negotiate a contract

Before deciding on a vendor, take the time to speak with one or two customer references, preferably someone in a business similar to yours. The local marketing solutions vendor should be able to supply you with several references if you cannot identify ones yourself. Use this opportunity to ask any additional questions, and to find out more about any questions that weren't answered during the demo. Make sure that the person you've been referred to is a primary user of the solution. Consider also asking these basic questions:

- Why did you move to a local marketing solution?
- Why did you select this platform over others?
- Has this platform lived up to your expectations?
- How long did the system take to implement?
- Who was involved in the implementation?
- Are you also using additional tools for listing distribution, reputation management, or SEO?
- Were there any surprises that you wish you'd known about beforehand?
- Where have you seen the most success? The biggest challenges?
- How are you measuring your own success?
- How easy was the set-up process and how long? Did the vendor help?
- How responsive is customer service?
- Has there been any down time?
- What is the most useful, actionable (favorite) report the platform generates?
- What do you wish they did differently?
- Why would you recommend this tool?

Although not all vendors require an annual contract, many do. Once you've selected a vendor, be sure to get in writing a list of what technology and support are covered in the contract. Ask about what kinds of additional fees might come up. Are there charges for custom integrations, if so, how much? What is the hourly charge for engineering services, and is there a minimum? What partner organizations are available to install and integrate the tool? If you need to train a new hire mid-year, what will that cost? What is the "out" clause? Obtaining the answers up front – and having them in writing – will ensure fewer surprises or additional costs down the road.

**The local marketing solutions vendor should be able to supply you with several references if you cannot identify ones yourself.**

## Conclusion

Marketing at the local level has become a business imperative for multi-location enterprises, which have recognized that their local stores, agents or dealers own the brand relationship with the consumer. Yet managing online citations, claimed and unclaimed listings, landing pages, online reviews and ratings, and data feeds for hundreds or thousands of locations is time consuming and costly. There are numerous online directories, search engines, and review sites that are now necessary for online visibility.

Automating local marketing processes through local marketing solutions can provide numerous benefits. However, these tools come in a variety of shapes and sizes, from point solutions that automate listing distribution to platforms that centralize listing management, SEO, local landing page development, responsive design, and online reputation management. Choosing the right partner means conducting a rigorous internal evaluation to determine your enterprise's business priorities, needs, and goals. *Do you have the right staffing in place to manage a local marketing solution? What type of relationship does the enterprise have with your local marketers? Is your C-suite on board with the investment? And, have you put KPIs in place to measure the return on that investment?* With the answers to these and other questions, your organization can move forward and reap the many benefits of local marketing solutions. ■

Any Lab Test Now  
PostNet

### Key executives

Constantin Lange, CEO  
Alexander Nitschke, CTO  
Mathilde Thomas, Country Manager

### Target customer

- Agencies and multi-location businesses

### Company overview

- 35 Employees.
- Founded in 2009.
- Started as an agency based in Cologne, Germany.
- Offices in Paris and Atlanta, Georgia.
- Developed in-house software to scale digital marketing campaigns across channels.

### Product overview

- Allows multi-location businesses and agencies the opportunity to manage advertising, their online presence, reporting, sales and administration.
- Integrates with Google Ads, Google Analytics, Google My Business, YouTube, Bing Ads, Facebook Ads, Facebook Business Pages, and many enterprise platforms such as Salesforce, Oracle, SAP and Quickbooks.

### Listing management

- NAP data synchronizes with Google My Business and Facebook Business pages, along with scheduling, posting, and performance reporting.

### Local SEO

- Provides integrated Google Analytics reporting, Google My Business Insights, and Google Search Ranking Reports that can be drilled down to the local level or rolled-up to the HQ level for multi-location businesses.

### Local landing pages

- Two solutions are available for Local landing pages:
  - A reverse proxy mirror-page technology, which generates a new landing page based on clients' CMS with dynamic variables such as swapping tracking numbers for PPC campaigns.
  - Landing page generator, where a brand defines the HTML structure of their locations' pages, and Adplorer's tool creates hundreds of local pages by inserting the unique information, such as the business name, address, phone number, business hours, map embed, contact form and photo gallery -- at scale.

### Reputation management

- Aggregates reviews from Google My Business for customers to respond to, as well as Facebook Business page comments to reply to directly within the client dashboard.

**Target customer**

- Multi-location brands (and their agencies) managing 20+ locations looking to improve their local search performance and take control of their data.

**Company overview**

- Founded in 2009.
- 50 employees.
- Offices in the United Kingdom, United States, the Philippines and Ukraine.
- Product overview
- BrightLocal provides a solution for multi-location companies to take control of their local search performance. Includes Local RankFlux, a ranking fluctuation monitoring tool for local search.
- Three key areas of focus include listings management, reputation management and local search reporting.

**Local SEO**

- *Local Search Reporting*: Reporting capabilities build a clear picture of brands' overall performance while giving insights to drill down and highlight underperforming locations through tracking local SERPs and GMB.
- *Multi-location ranking reports*: Clients can learn how they are performing in local SERPs overall, or drill down and highlight underperforming locations.
- *Google My Business auditing tool*: Quickly assess top-performing competitors and uncover high-performing business categories for each target search term. Clients can get detailed reporting and GMB insights data.

**Reputation management**

- *Reputation Management*: Brands can stay on top of their reviews through multi-location review feeds. In addition, a review-generation platform offers deep insight into consumer behavior to improve visibility and click-through rates.
- Generate, monitor, and reply to new reviews for hundreds of locations. Build reputation through smart reporting and powerful review generation to drive consumer trust and local search performance.
- Review monitoring and tracking in a single feed to gain unique insights into trends and underperforming locations.
- Review acquisition, ability to send review invites via email, text, fixed URL and in-store through kiosk mode.

**Listing management**

- *Listing Management*: A customized listing strategy is built for every brand through relationships with data aggregators, APIs as well as direct-to-site submissions to the most powerful and relevant directories for each client.
- Claims and manages local business listings.
- GMB optimization through competitor and industry research.
- Hybrid approach of data aggregators, APIs and direct submissions.
- Reach of 1,600 directories including industry niche sites.
- Bespoke publisher research based on industry — no one size fits all.

- Multi-location brands that operate through a network of franchisees, dealers, retail stores or agents and brokers.

**Company overview**

- Founded in 1998 as part of WNG Advertising; incorporated as Pica9, Inc. 2001.
- Launched CampaignDrive — Software as a Service (SaaS) local marketing automation built for brand consistency and advertising localization — in late 2014.

**Product overview**

- CampaignDrive is Pica9's proprietary SaaS platform for franchises and other businesses with distributed locations. The white-labeled centralized platform enables businesses to put local marketing in the hands of local marketers (who know their markets best), while maintaining brand integrity through governance; leveraging dynamic templates and editing/updating permissions configured based on user roles.

**Local SEO**

- Landing page templates in CampaignDrive provide centralized SEO models that local marketers can customize with meta tags, page content, keywords, URLs and timing of page publication.
- Digital templates can be optimized for mobile display.

**Local landing pages**

- *Digital Asset Management (DAM)*: Enables brands to organize digital brand assets centrally to make them available to local field marketers from a single source.
- *Content Management*: Manages content and design templates, brand colors and fonts, to deliver images and marketing copy to field marketers.
- *Local Templating*: Deploys brand-compliant templates to local marketers for print, digital, and email marketing. All templates, whether print or digital, can be installed and configured by customers directly.
- Local landing pages can be customized by local marketers using the digital templates features.
- Templates can be installed by customers with a simple upload process.
- *Reporting*: Analytics provide real-time data on local campaigns, identifying top templates, assets, and users, as well as ROI reports for templates and other creative. (Real-time landing page analytics provided by Matomo) Available per-page, per-location, and across the entire brand.
- *Workflow Options*: Administrative tools enable central brand managers to customize settings for user permissions, budgets, and marketing approvals.

**Key executives**

William Rodriguez,  
President & Co-Founder  
  
Ryan Gesler,  
CTO & Co-Founder  
  
Jennifer Moore,  
Chief Marketing Officer

**Company Overview**

- Founded in 2011
- 10 Employees
- Silvercrest was founded by William Rodriguez and Ryan Gesler who realized a growing need for franchises to access marketing and media efficiently, teaming up to create Silvercrest, an agency dedicated to delivering brand solutions for franchise and multi-unit organizations with the combination of proprietary technology, customer data, marketing needs, and media buying, harnessed in one sophisticated yet simple platform: LMap.

**Product overview**

Silvercrest is a technology company dedicated to delivering sophisticated marketing and media solutions for franchises and multi-unit organizations that allow them to manage all of their marketing and media needs from a single application. LMap, which stands for Local Marketing Automation Platform, allows brands to manage and access all of these needs from one portal:

- Territory analysis, to identify optimal real estate or customers in a trade area
- Media planning and buying (including broadcast, all print publications, outdoor, and direct mail in addition to online media)
- National ad fund budget creation tools
- Creative customization and versioning automation
- Print-on-demand
- Grand opening automation
- In-store POS and LTO programs and kitting
- Specialty products and apparel
- In-Store programmatic POS and LTO coordination and kitting
- Local store marketing spend tracking
- Email marketing
- Social media management
- Coupon barcode creation and scanning

Leveraging technology allows Silvercrest to facilitate advanced data aggregation and customized yet automated solutions, powered by their proprietary cloud-based, cutting edge solution, LMap.

**Listings management**

- LMap, through their exceptional relationships with data aggregators, helps businesses ensure that their contact information is represented accurately on all listing sites across the web, with the information being constantly tracked and inconsistencies updated, even in the most obscure of listings. Moreover, the platform updates the listing, versus masking the listing, ensuring that once changed, it remains changed.

**Local SEO**

- LMap bolsters businesses' understanding of how to optimize their site ranking organically by running a proprietary programmatic site audit algorithm and provides an easy to understand action item list for improving positioning on search engine results pages.

**Local landing pages**

- LMap allows for the dynamic creation of landing pages based on available data like IP address, demographics, date and time of visit, location data, referring media, as well as first name, last name or ZIP code.
- Once a page or ad is deployed, Silvercrest can deliver real time analytics on all of the above data points, revealing the effectiveness of different marketing initiatives.

**Reputation management**

- Silvercrest's Reputation Management services within LMap will search the web -- from Google to Facebook to Yelp and all those in between -- and collect every review written about the franchise.
- The system also allows users to seamlessly reach out and respond to the posts from one centralized location. Businesses can also be notified as soon as the customer reacts.

**Paid search/social media**

- LMap aids with everything from creating and publishing engaging content to curating successful campaigns to assessing the impact.
- The LMap social media tool is built specifically to address the brand consistency and management needs of multi-location businesses, making it easy to scale efforts across hundreds or thousands of local pages on sites to Facebook, Instagram, Twitter and LinkedIn.
- The integrated Social Media Listening Tool is able to track, interpret, and learn what is being discussed on all social media channels.
- Silvercrest's technology also gathers the best keywords based on location and usage to create powerful PPC campaigns. As the campaign evolves and performs, the LMap system constantly monitors and optimizes for maximum efficiency, reporting in real time.
- LMap simplifies planning, posting, grouping, scheduling and reporting on a single platform.

**Pricing and support**

- An annual contract is required.
- A free trial or other test period is offered.
- Pricing varies based on the number of locations and products contracted.
- Silvercrest offers 24/7 complimentary customer service for all aspects of our LMap platform, from print-on-demand to media consultation and placement.
- Silvercrest offers additional help in setting up art files or implementing specific programming or development requirements, for additional fees.
